## The shape of comfort

Inspired by biophilic design principles and natural materials, it helps create warmer, more human-centred environments while enhancing comfort through both light quality and acoustic performance.

### Ripple

is a large-format linear sound-absorbing range integrated within the ELEMENT range. Its vertically undulating structure, made from thermoformed recycled PET, delivers both acoustic performance and a distinctive spatial presence.

### Strap

is a sound-absorbing range available in a focal version integrated within the ELEMENT range. Its thermoformed structure, made from recycled PET, provides effective acoustic absorption.

### Tide

is a large-format suspended sound-absorbing range that creates singular forms shaped by gravity, forming a landscape of organic silhouettes. It is available in two material versions — wool or recycled PET — each offering a distinct visual and material expression.

Fabric with maximum flame retardant certification B-s2, d0

Thermoformed process

Class A

High acoustic absorption  
aw up to 1.00 (UNE-EN ISO 354:2004)  
Class A (EN ISO 11654)

100% Wool  
Recycled PET
